DOCKET
00-REN-1194
DATE JAN 23 2006
RECD. JAN 25 2006

To Whom It May Concern:

LUND enterprises, Inc has been a California company for over 25 years specializing in the wind-generating renewable energy industry. We know first hand the effectiveness of wind-generators along with their reliability and environmental benefits to California.

We currently have several existing patents which can be used to retrofit California's existing wind generators, for a relatively small cost California's current wind power capacity can be increased an additional 30% to 2.6GW. Our strategy and figures have been confirmed by outside independent engineers also involved in this exciting industry.

With respect to Paragraph 8 on page 4, our approach is to take already proven technology in aerospace, electrical, and mechanical science and apply these advancements to this industry. This approach has already been proven and merely needs to be implemented. We can immediately increase the quantity of California's electricity generated by in-state clean renewable resources.

We have a very practical solution and one which can be easily quantified, which is always important for measuring success. We know that our technology and solutions will have a great near-term commercial promise for increasing California's wind-generated renewable energy.

Please contact me at your earliest convenience and let me know what the next steps will be.

Sincerely

Arnold Lund
